

# Barley

## Planet Seed Information Sheet

**Very high yielding · World no. 1 malting barley variety · Fully approved by Kenya Breweries · Very low screenings and grain Nitrogen · Adaptable to a range of environments · End Point Royalty variety**

\* End Point Royalty is a model where the grower only pays a seed royalty when the seed is delivered to East Africa Maltings. This allows the risk to be shared between the grower and the breeder and the Royalty is proportional to the yield – in other words the success of the crop. This shared risk model also means that the upfront seed cost is reduced for the farmer.

	Control Yield	Net Blotch	Straw Strength
	4.6 t/ha		
RGT Planet	100	5	6
Grace	89	6	6
Laureate	97	6	5
Propino	90	3	6
KWS Premis	Withdrawn		
KWS Thalís	Withdrawn		

**Disclaimer:** These guides are meticulously crafted based on the extensive research and practical experience of our Centre of Excellence team. These processes have been tried and tested on our farms to ensure their effectiveness. However, it is important to note that agricultural outcomes may vary in different environmental conditions and settings. While we strive for the highest standards of accuracy, the results you achieve may depend on local factors and variables beyond our control. We recommend adapting the protocols to your specific circumstances and consulting with local experts as needed to optimize your farming practices. Agventure cannot guarantee identical results in all situations, but we are committed to supporting you on your farming journey to the best of our abilities.
